Reference Electrodes

Portable reference electrodes are used to obtain structure-to-electrolyte potential measurements during field inspections and corrosion surveys. Main elements of reference electrodes include copper-copper sulfate (Cu-CuSO_4), silver-silver chloride (Ag-AgCl) and zinc-zinc sulfate (Zn-ZnSO_4).

This online system is for **PRODUCT INQUIRIES ONLY**. Please make an inquiry here or call **866.CORRPRO (866.267.7776)** for more information or to place an order.
