

Product Catalog

The Corrpro catalog lists a variety of corrosion prevention products including anodes, backfill, rectifiers and cathodic protection systems.

This online system is for **PRODUCT INQUIRIES ONLY**. Please make an inquiry here or call **1.866.CORRPRO (866.267.7776)** in the US or **+44 (0) 1642 614 106** in the UK for more information or to place an order.

[Anodes](#)

Impressed current and galvanic anodes for cathodic protection systems.

[Cable, Wire and Splicing](#)

Cable, wire, splicing materials, bonding materials and other accessories for cathodic protection systems.

[Connections](#)

Connections and other accessories for cathodic protection systems.

[Insulating Materials](#)

Insulating kits with gaskets, washers and dielectric unions for complete insulation.

[Rectifiers](#)

DC Power sources for impressed current cathodic protection (ICCP) systems.

[Remote Monitoring Systems](#)

Remote monitoring for cathodic protection systems

[Safety Products](#)

Tapes, markers and terminal blocks for identifying pipelines and cables.

[Test Stations, Junction Boxes and Accessories](#)

Test stations, junction boxes, coupons, and shunts used to make connections and monitoring structures.

© 2016 Corrpro Companies, Inc.

[Backfill](#)

Backfill for your cathodic protection system.

[Coatings, Adhesives & Tapes](#)

Coatings, adhesives and tapes for corrosion protection.

[Lightning & Grounding](#)

Air terminals, conductors and fasteners to avoid lightning damage to buildings and critical equipment.

[Pinbrazing](#)

Pinbrazing is a unique patented brazing method used to apply electrical connectors to steel constructions.

[Reference Electrodes](#)

Portable and stationary reference electrodes are used to obtain structure-to-electrolyte potential measurements during field inspections and corrosion surveys.

[Remote Power Supply](#)

Remote power supply units are designed to provide electricity to impressed current cathodic protection (ICCP) system rectifiers located in areas with no access to AC power.

[Test Equipment and Instruments](#)

A variety of current interrupters, high impedance adapters, locators, meters, and holiday detectors to suit your testing needs.
